

mufin

the leading provider of
music recommendation and
music identification

From music identification, music recommendation to music discovery –

mufin features solutions for a 360° music consumption

audioid

Music identification & monitoring

mufin audioid is the solution for music identification as well as recognizing and monitoring of music and other audio content. mufin audioid identifies songs or adverts in an audio signal which can also be used in a broader context for monitoring, copyright protection or billing processes. mufin audioid can be used for mobile solutions and also works in an offline surrounding.

audiogen

Automatic playlist generation

mufin's audiogen software is a semantic audio technology enabling automatic playlist generation of tracks with sound characteristics similar to a "seed song" and features playlists according to your mood with just one click (e.g. happy/sad, calm/energetic, etc.).

audioscout

Recommendation of similar tracks

mufin's audioscout software is a web service enabling the recommendation of tracks with sound characteristics similar to a "seed song". It is based either on mufin's database containing 9 mil. track footprints or on customized databases.

vision

Visual music navigation

mufin vision represents your music library visually as it displays every song in a collection as a dot in a coordinate system. This creates an easy and fully sound-based alternative to the list view. The two or three axes can be allocated with a range of musical attributes, incl. happy/sad and calm/aggressive, allowing an interactive experience of a music collection according to your current mood and sound preferences.

mufin player

Music software with mufin features

The mufin player is the world's first music player to detect your preferred music sound. The player features all mufin technologies including visual music display, automatic playlist generation and music recommendations. It offers a direct way to the integrated cloud storage allowing seamless integration into the mufin ecosystem.

Mobile app

mufin player for mobile touch devices

mufin's technologies are built for mobile devices ensuring easy connection to the mufin ecosystem with a visual display of the music collection as well as music recommendations from the local library.

mufin.com

mufin's database includes millions of tracks

The mufin database contains 9 million songs with rich metadata and auto tags according to different sound and mood preferences. The database offers music recommendations, automatic playlist generation and forms the basis for the music identification technology mufin audioid.

ecosystem

Cloud storage system with integrated mufin technologies

The mufin ecosystem holds a cloud storage system specialized on music streaming with access via mufin player, any web browser and mobile apps keeping all uploaded music files in sync. The ecosystem offers automatic playlist generation, music recommendations based on the stored music collection as well as visual music navigation.

mufin offers first-class mobile and desktop solutions for music recommendation and audio identification.

The complete portfolio is being commercialized in a B2B environment as white label solutions, licenses of the technology or separate solutions. mufin's B2B solutions reach a variety of customer groups including broadcast monitoring stations, video and audio online services or download shops amongst others.

mufin develops technologies on the basis of automatic sound analysis and by means of a hybrid approach which ease the process of discovering, navigating and managing music in the digital age.

By using mufin technology, companies can offer their clients the opportunity to find new music and to experience their own digital music collections in a new way using automatic playlist generation, metadata self-repair, and visual music navigation.

mufin's music recommendation and recognition technologies can be used anywhere music is listened to: on the PC, on the web or on mobile devices.

mufin GmbH is a full subsidiary of MAGIX AG located in Berlin, Germany.
